155th O2k-Workshop on High-Resolution Respirometry

2022 Oct 03 – 08

Schroecken, Vorarlberg, Austria

The 155th O2k-Workshop on high-resolution respirometry (HRR) is the 43rd International Oxygraph Course held in Schroecken since 1988. We provide an overview of the O2k-FluoRespirometer, with real-time analysis by DatLab 7.4 or DatLab 8 (new) and applications of the Titration-Injection microPump TIP2k.

Instrumental setup and service of the polarographic oxygen sensor (OroboPOS) are demonstrated, followed by hands-on practice in teams. Instrumental quality control is a fundamental component of HRR and will be put to practical test in teams using multiple O2k.

A wide range of mitochondrial topics is covered; abstracts and experimental experiences can be presented by participants. IOC participants invariably asked for a detailed discussion of protocol design. The [Blue Book](#) (5th edition) and the [Mitochondrial physiology](#) provide a basic introduction to mitochondrial bioenergetics, complementing the training course, and therefore we recommend reading them beforehand.

The O2k-Workshop will give an introduction of the O2k-Applications using fluorescence, (ROS production measurement with Amplex™ UltraRed, mt-membrane potential with safranin, TMRM or rhodamine 123, ATP production measurement with Magnesium Green™ and Ca²⁺ uptake capacity with Calcium Green™). The hands-on will include Amplex UltraRed experiments with HEK 293T

cells, demonstrating the unique advantages and limitations of simultaneous monitoring of oxygen concentration, respiration, and hydrogen peroxide production.

Finally, the new applications of the NextGen-O2k will be presented: the Q-Module to assess coenzyme Q-redox state (with a Demo-experiment), NADH-Module to assess NAD-redox state and PhotoBiology (PB) Module, which allows to detect oxygen production from photosynthesis. It is possible to join for a visit to the Alpmuseum, and lunch breaks provide an opportunity for relaxing Walks&Talks, enjoying the refreshing scenery of the secluded alpine environment or using spare time for individual practice.

O2k-Workshop: OUR COMMON AIMS

- **Mitochondrial physiology:**
Study mitochondrial function in the **context** of cell physiology and pathology
- **Instrumental performance – the O2k:**
 - ⌚ Learn **High**-Resolution FluoRespirometry
 - ⌚ Gain **hands-on** experience
 - ⌚ Extend to O2k-**Multi**Sensor applications
- **Excellence in research:**
 - ⌚ Instrumental **quality** control
 - ⌚ Experimental design for **innovation**
 - ⌚ Data analysis meeting superior **standards**

Oroboros - as a driving force in mitochondrial physiology - extends the analytical and diagnostic power of high-resolution respirometry by integration of NADH- and Q-redox monitoring in the **NextGen-O2k**. We aim at establishing the Oroboros quality control management for dissemination to our worldwide O2k-Network laboratories. This will become an effective contribution to address the acute *reproducibility crisis* of scientific investigation. In the spirit of Open Science and global networking, we will enable data sharing across projects and institutions in an Open Access database on mitochondrial physiology and pathology, to resolve the *inflation crisis* and ultimately the *value-impact crisis* of present academic publication. This will support key developments in mitochondrial medicine. In addition, we expand our business to algal biotechnology and ecology with the NextGen-O2k PhotoBiology-Module, widening our focus from medicine to environment and climate.
